[What was the challenge or opportunity?](#)

Old #2 fuel oil boilers were in need of replacement

[What was your approach or solution?](#)

Replaced boilers with dual fuel biomass/oil boilers, using wood pellets as the major source of fuel

[What is the impact ?](#)

Annual 30% reduction in fuel costs burning wood pellets vs burning #2 fuel oil
Source of pellets is from local supplier (7 miles away), helps to keep local jobs
Less CO2 emissions from burning wood pellets
